**Search for Z' bosons decaying into tau
pairs in p-p Collisions at $\sqrt{s}=13$ TeV
with the CMS Detector**

Thesis presented by
Carlos Felipe González Hernández

for the degree of
DOCTOR EN CIENCIAS FÍSICA.

Supervised by:
Juan Carlos Sanabria Arenas PhD.

Bogotá, Colombia.
2017

Introduction

Introduction.

1 Zprime Bosons

1.1 Standard Model

1.2 Motivation for Zprime Bosons

2 CMS Experiment

2.1 LHC Accelerator

2.2 The CMS Detector

2.3 The Tracker System

2.3.1 Pixel Tracker

2.3.2 Silicon Strip Detector

2.4 Electromagnetic Calorimeter

2.5 Hadronic Calorimeter

2.6 Muon System

2.6.1 RPCs

2.6.2 DTs

2.6.3 CSCs

2.6.4 GEMs

3 Particle Identification and Event Reconstruction

3.1 Jets Identification

3.2 Electron Identification

3.3 Muon Identification

3.4 B-Jet Identification

3.5 MET

3.6 Tau Lepton

3.6.1 Tau Identification

3.6.2 Tau Reconstruction

3.6.3 Working Points

Efficiency of Working Points

3.6.4 Fake Rates

3.6.5 Perspectives Run III

4 Search for Z' bosons decaying into hadronic-tau pairs

4.1 Analysis Strategy

4.2 Data sets and Monte Carlo samples

4.3 Trigger

4.3.1 Trigger Efficiency

4.4 Event Selection

4.5 Background Estimation

4.5.1 QCD

4.5.2 Drell-Yan

4.6 Systematics

4.7 Results

5 Conclusions

Conclusions
